

SUGAR-FREE SMILES LAST LONGER

Sugary treats may taste great for a few seconds, but they can cause cavities that last forever. By avoiding sugar, and by brushing and flossing right after meals and snacks, you can help prevent cavities from ever starting in the first place. Soda pop, candies, cakes, cookies, pies and even fruit drinks can all create sticky plaque on your teeth and gums that lead to disease.

It's easy to smile when you feel good. It's easier to maintain good oral health habits when you have some support. LifeSmile has the answers to your dental questions and can help keep you smiling for a lifetime.

You Don't Need Sugar to be Sweet

Great smiles are easy to maintain, but hard to regain. Besides avoiding sugar, here are some tips for keeping your oral health the best it can be:

- Eat a balanced diet with plenty of fruits, vegetables, whole grains, and low-fat dairy products. Keep foods high in sugar or starch to a minimum, and drink plenty of water every day.
- Brush gently at least twice a day, with special attention to the gum line. Use a soft-bristled toothbrush and fluoride toothpaste.
- Floss at least once a day, but be gentle with your gums and don't force the floss between your teeth.
- Don't forget to brush your tongue—it cleans and refreshes your mouth and removes bacteria.
- Visit your dentist or dental hygienist regularly for professional cleanings and oral exams.

Quick Tips for Sugar-Smart Snacking:

- Choose healthy treats like nuts, raw vegetables, or even low-fat yogurt.
- Fruit is naturally sweet and contains vitamins that support a strong body and teeth.
- Choose water over fruit juice, sport or energy drinks when you are thirsty.
- Chew sugar-free gum after snacks to reduce the acids that cause cavities.
